DiscIRC Documentation

Release 0.1

TROUVERIE Joachim

Dec 06, 2017

Contents

1 Installation **3**

2 Use **5**

2.1 Launch 5

2.2 Private messages 5

DiscIRC is a bot that syncs messages between Discord and IRC. It's written in Python using the discord.py and bottom libraries.

CHAPTER 1

Installation

You can install it simply using *pip*:

```
$ pip install discirc
```

CHAPTER 2

Use

2.1 Launch

You first need to configure **DiscIRC** thanks to a config file. By default **DiscIRC** tries to load a *~/.discirc* file, if not present you need to give it to the app with the – *config* option.

To create a valid config file please see the example.

Then simply run **DiscIRC** thanks to the available command:

```
$ discirc
```

2.2 Private messages

DiscIRC handles private messages.

You need to prefix your message with a *@User* when sent from **Discord** and with *User:* when sent from **IRC**.
