Release 0.1

TROUVERIE Joachim

November 07, 2016

1	Installation	3
2	Use	5
2.1	Launch	5
2.2	Private messages	5

DiscIRC is a bot that syncs messages between [Discord](#) and [IRC](#). It's written in Python using the [discord.py](#) and [bottom](#) libraries.

Installation

You can install it simply using *pip*:

```
$ pip install discirc
```

2.1 Launch

You first need to configure **DiscIRC** thanks to a config file. By default **DiscIRC** tries to load a `~/.discirc` file, if not present you need to give it to the app with the `- config` option.

To create a valid config file please see the [example](#).

Then simply run **DiscIRC** thanks to the available command:

```
$ discirc
```

2.2 Private messages

DiscIRC handles private messages.

You need to prefix your message with a `@User` when sent from **Discord** and with `User:` when sent from **IRC**.
